ABSTRACT:

Web Page for Shri Enterprises” is to help the user to show the various products where stock is more available as compare to physical marketing. Thus our proposed methodology reduces the user’s effort and time of buying Products.

If a product is ordered then the stock will reduce by the number of orders. On successful order delivery date and unique code will be sending to users mobile. Also the system reduces the paper work.

KEYWORDS:Online shopping website, ecom, Ecommerce, shopping Cart.

I. INTRODUCTION:

Online shopping/ Delivery have become a popular way of shopping for consumers. This new innovation for shopping not only brings a great number and variety of merchandise to potential consumers, but also offers a numerous business activities and huge market. Social media is no longer known only as a media that facilitates its users to present themselves

on the internet but also as media to sell some products to consumers known as an online shop. Because of the numerous advantages and benefits, more people say that they prefer online shopping over conventional shopping these days. Online shopping or marketing via internet is the use of technology (computer) for better marketing production.

Over these past years E-commerce has developed very fast because of many advantages related to buying on internet because of easier transaction and lower cost as compared to other types of shopping. Through online shopping everyone can buy faster, have more alternatives and can order various product or services with lower price.

The main responsibility of this system is to help the user to show the various products where stock is more available as compared to physical marketing. Thus, our proposed methodology reduce the user’s effort and time of searching Products.

User Module-

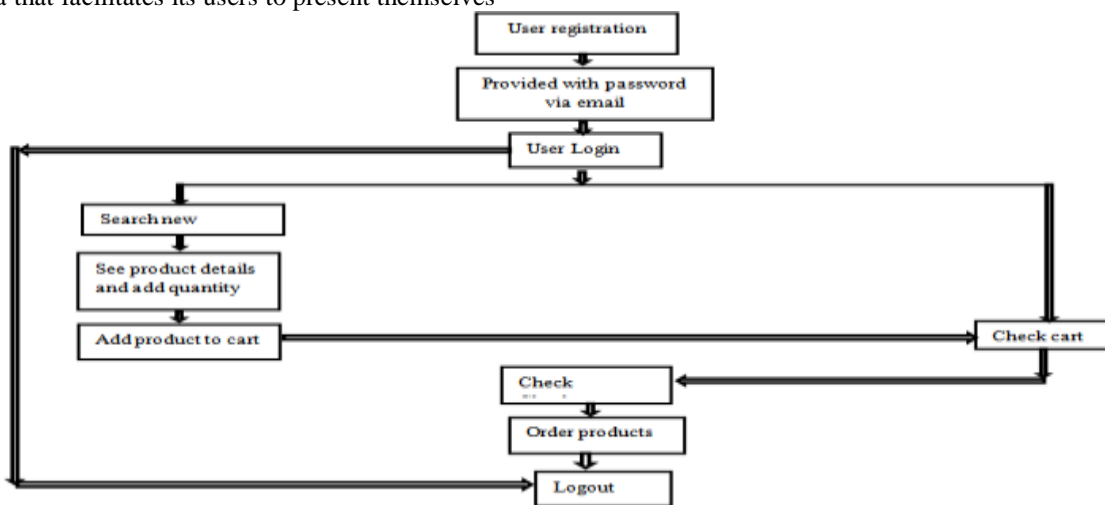

Fig. User Module

In User model if the user is new, he should register first. He should fill in all the information in

the registration form. After filling the information, he will receive a mail from Shri Enterprises containing his user ID and Password.

While logging in, he can login by entering his user ID and password which he received via email. After logging in, he can search for the products he wants and get information about it and he can enter quantity of product. Then add the

product to the cart and check the cart to see if the product you have chosen is correct or not.

If your products are right, you can go to check-out and check your name or address is correct. If that's right, you can order those products. Once the order is complete you can logout.

If they have already logged in and have the product in their cart, they can go directly to the cart and do the next procedure.

Admin Module:

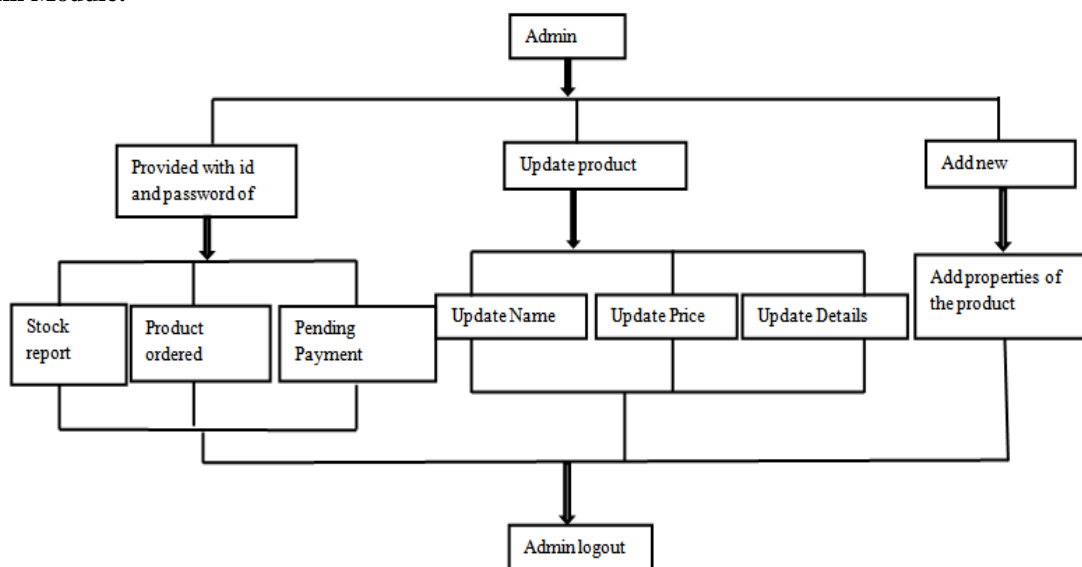

Fig. Admin Module

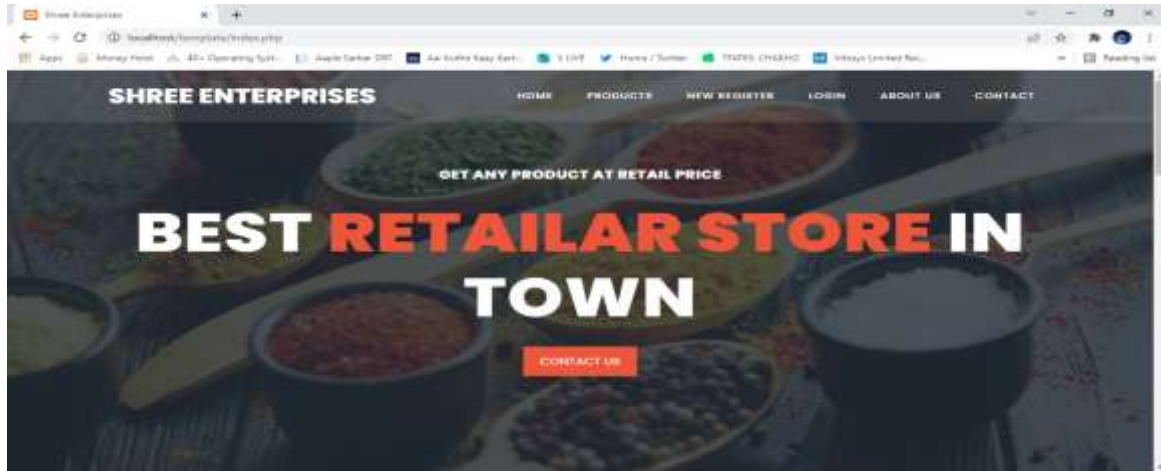

Admin will get unique login ID and password from each user to identify them. The admin will be provided with ID and password. Then the admin will be able to view all over the stock report, products ordered, pending payments. In case, any product is ordered, the stock will reduce by the number of products that are ordered.

Here the admin means the sponsor of this

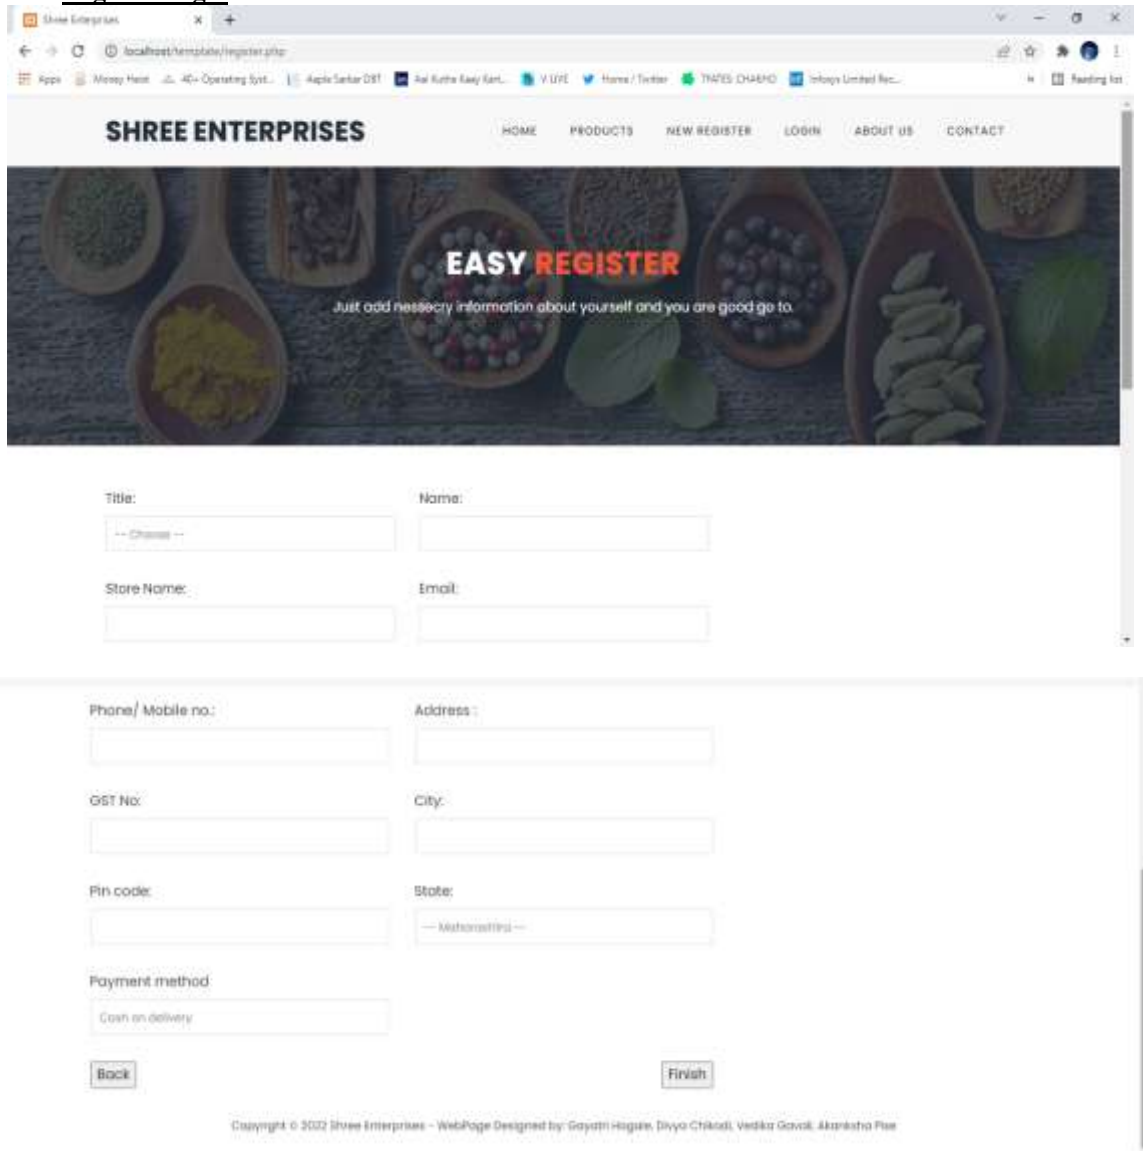

project. Admin has to login to account using ID and password provided previously. After login, admin can check the stock reports, products that are ordered or pending payments. If admin wants to add or update the product, he can do that by filling the product name, price, details, HSN number, and the image path he wants to display.
